CN032 AC Servo Solution Hardware Manual (for RZ/T2L)

R12UM0051EJ0101
Rev.1.01
Dec.15, 2023

Abstract

This document describes the specifications of the CN032 AC Motor Solution equipped with the MPU of the RZ/T2L group manufactured by Renesas Electronics. We provide an environment for evaluating RZ/T2L without the need for customers to prepare their own hardware.

<<Caution when handling the solution board>>

Don't touch the board while power is supplied because CN032 AC servo solution board contains high voltage circuits.

1. Overview

1.1 AC Servo Solution Overview

CN032 AC Servo Solution kit is a solution for Servo motor drive systems equipped with Renesas Electronics' RZ/T2L and related products. CN032 AC Servo Solution consists of two boards, a controller board equipped with RZ/T2L (hereinafter referred to as the controller board) and an inverter board.

It shows the capability and feature of RZ/T2L for network communication module and motor control as references for applications.

1.2 Hardware Block Image

The CN032 AC Servo Solution block image is shown in Figure 1-1.

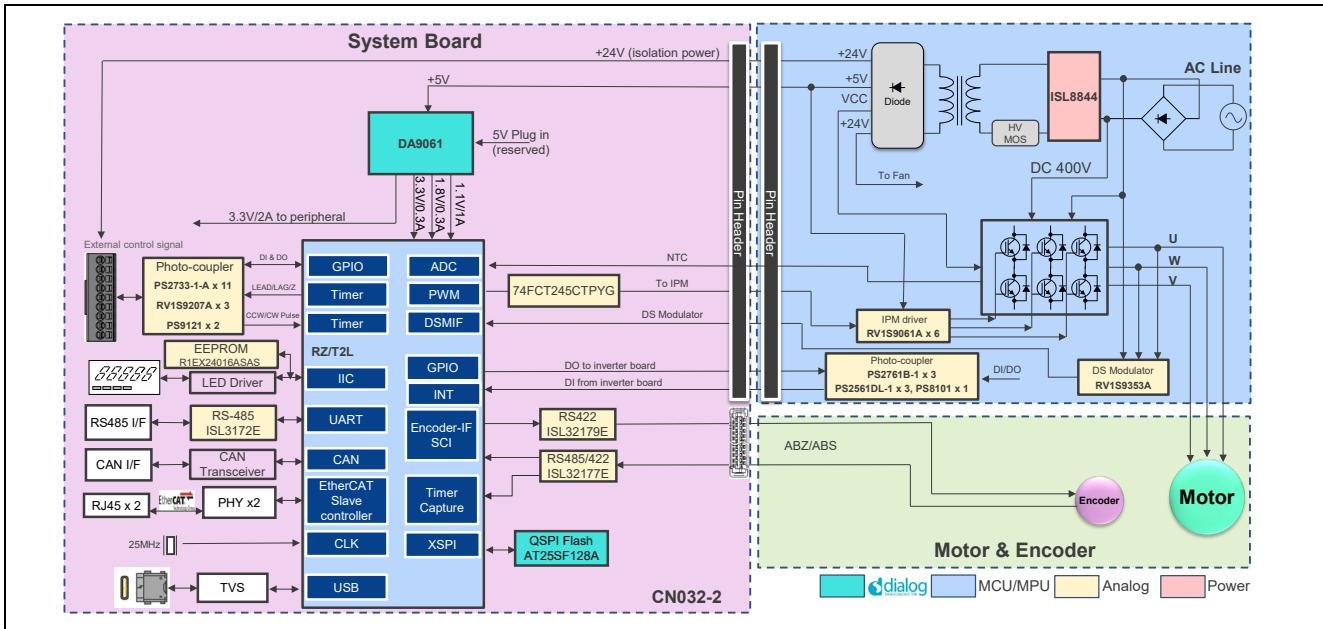

Figure 1-1 AC Servo Solution

The CN032 AC Servo Solution image is shown in Figure 1-2.

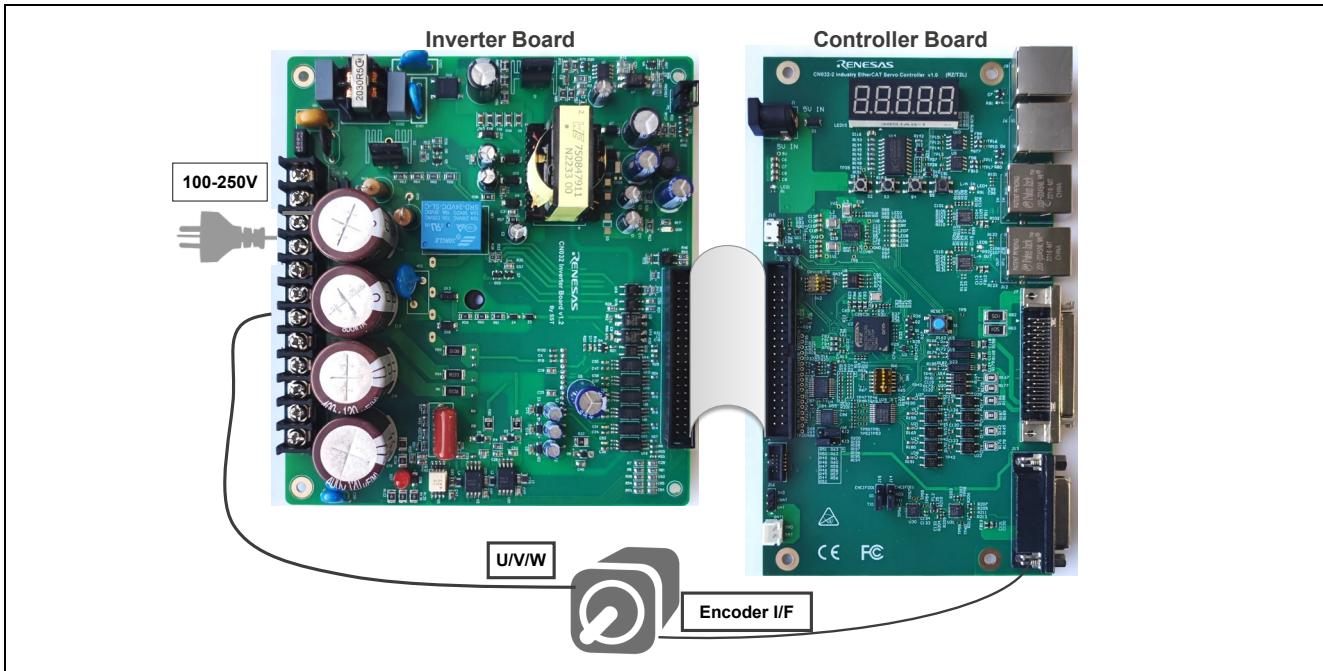

Figure 1-2 AC Servo Solution

2. General Specifications

Table 2-1 Specification's summary

Items		Description
CPU	Series	RZ/T2L Single Arm Cortex®-R52
	Package	R9A07G074M04: 196-pin FBGA
	Clock	Up to 800MHz
	ATCM/BTCM	512KB/64KB
	System RAM	1MB
IPM		PSS15S93E6 from Mitsubishi, 600V/15A
QSPI Flash		128MBIT, AT25SF128A-SHB-T (Renesas)
EEPROM		16KBIT, R1EX24016ASAS (Renesas)
Power In		100-250V AC, 1.5A max consumption
Interfaces	JTAG (10-PIN)	
	EtherCAT port x 2	
	Micro USB x 1	
	RS485 x 1	
	CAN x 1	
	UART x 1	
	Digital input x 6, Digital output x 8	
	Display 5-bit eight-segment LED, Key x 4	
	Encoder Interface x 1 (Support absolute encoder using ENCIF or SCI pins and incremental encoder)	

Table 2-2 Environmental specifications

Item	Specification	Remarks
Operating temperature limit	0~40°C	At normal temperature
Operating humidity range	80% or less	No condensation

Table 2-3 Board size

Item	Specification	Remarks
Controller board	176(W)×100(D)×1.6(T)	NO include protrusions, NO include component height
Inverter board	150(W)×135(D)×1.6(T)	NO include protrusions, NO include component height

The main parts in Controller Board description are shown in Figure 2-1.

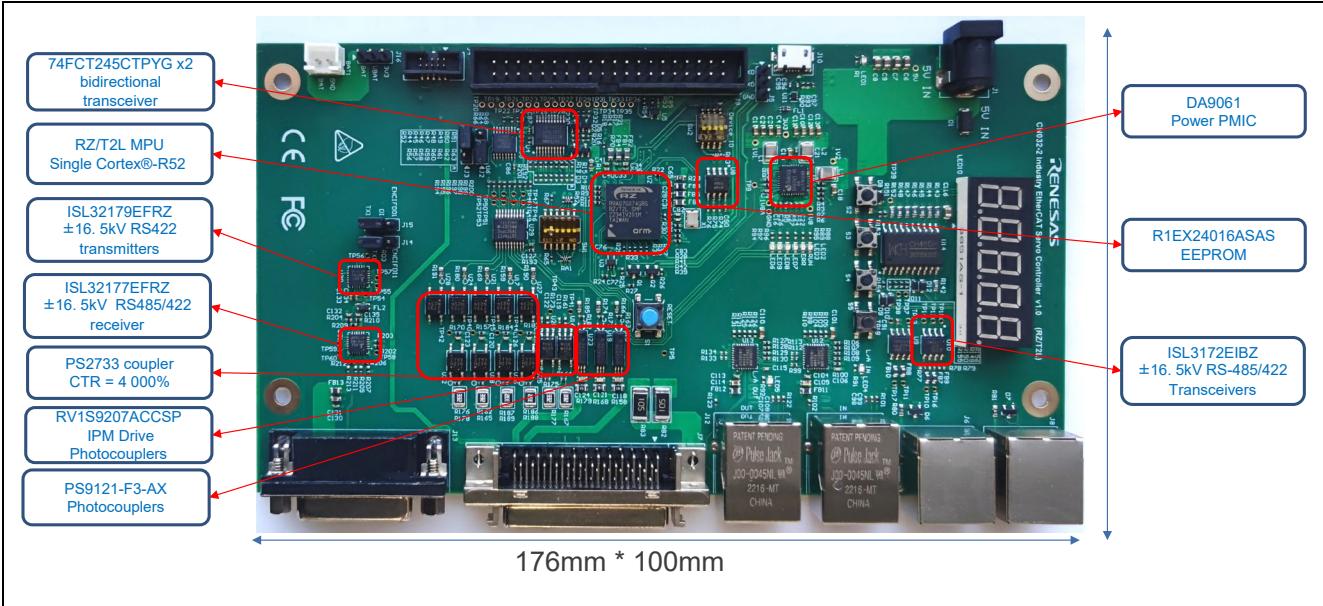

Figure 2-1 Controller board

The Inverter Board image is shown in Figure 2-2.

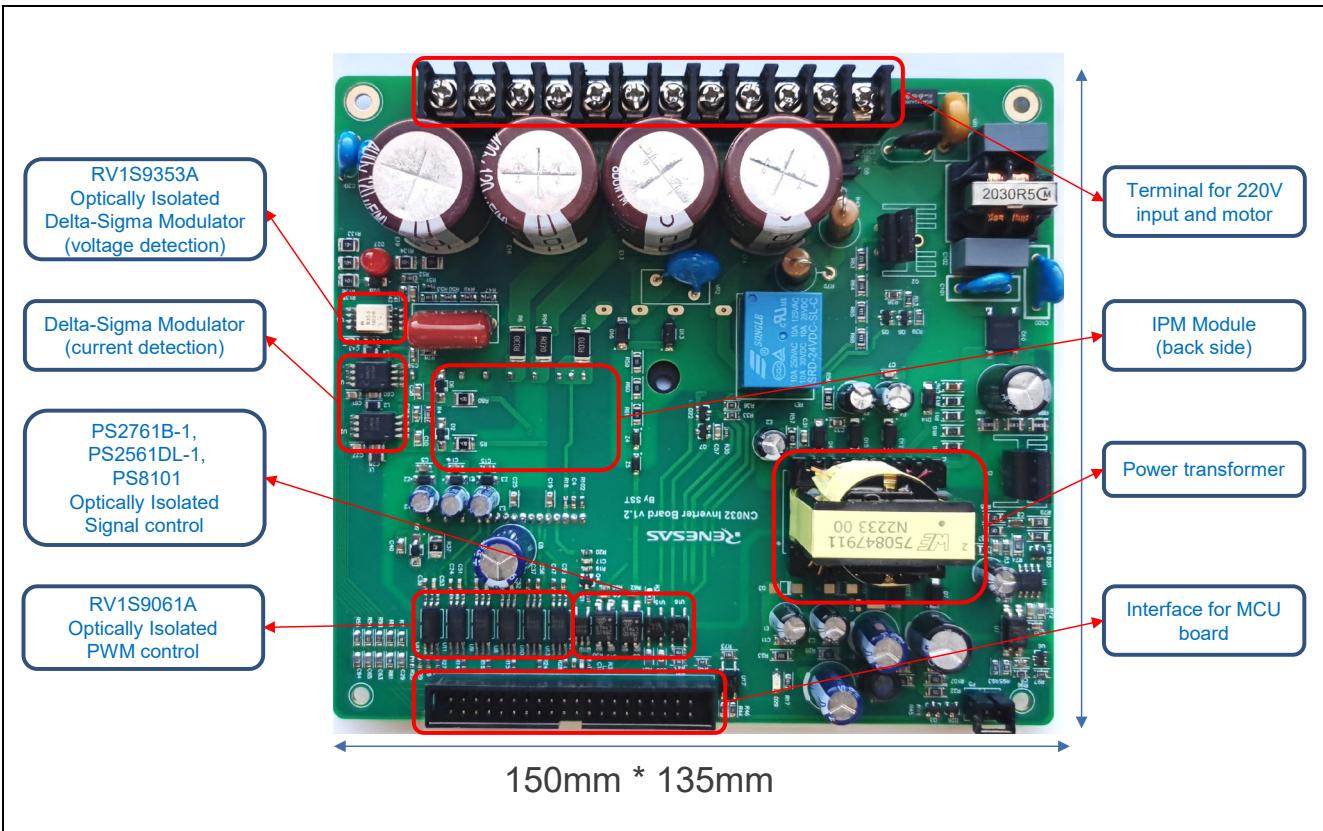

Figure 2-2 Inverter board

3. Interface Description

3.1 Power Supply

Inverter board can be inputted from 100V to 250V AC, and it provides 5V to Controller board for power supply. The main power supply for Controller board consists of 5V, 3.3V, 1.8V, 1.2V, 1.1V. The PMIC power supply 1.1V/1.8V/3.3V (MCU/peripheral) and 1.2V for a reserve.

Controller board can be inputted from 5V DC from DC jack. It can be supply 5V DC from a power source other than the 5V DC power supply from the inverter board.

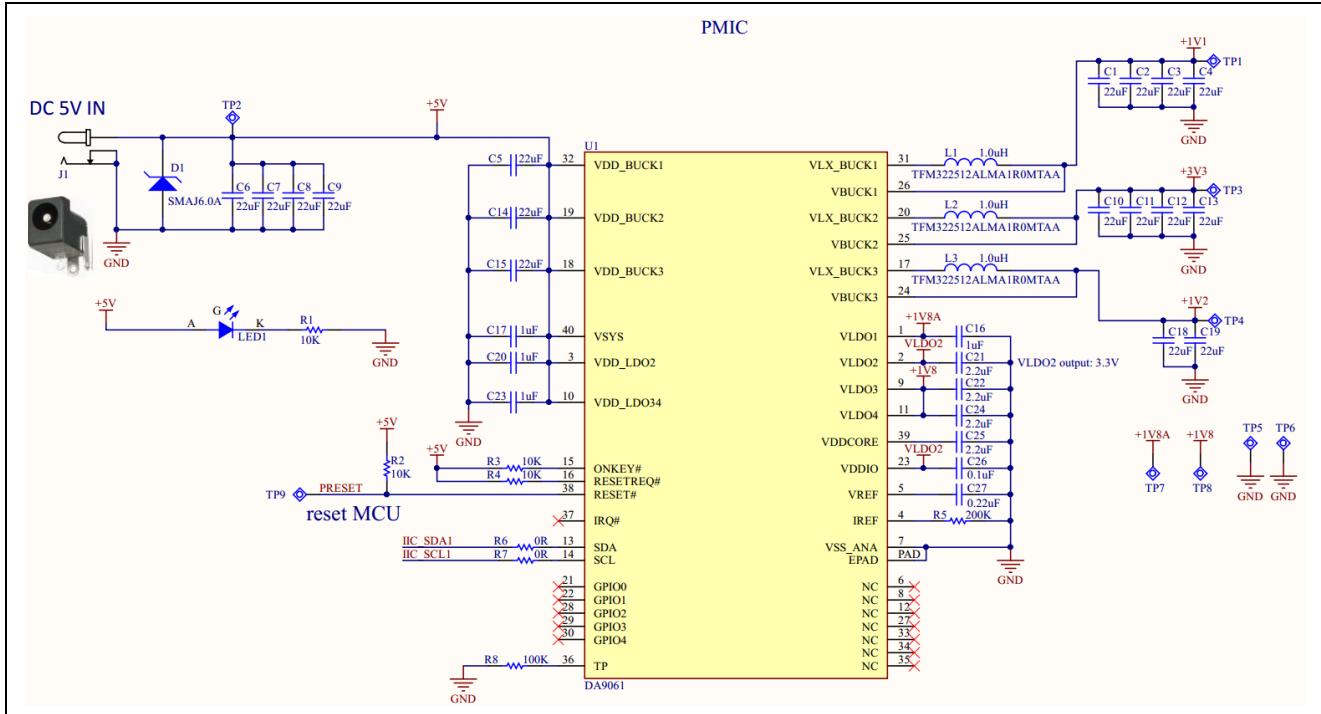

Figure 3-1 PMIC

Here is the Power on/off sequence and timing supplied from PMIC.

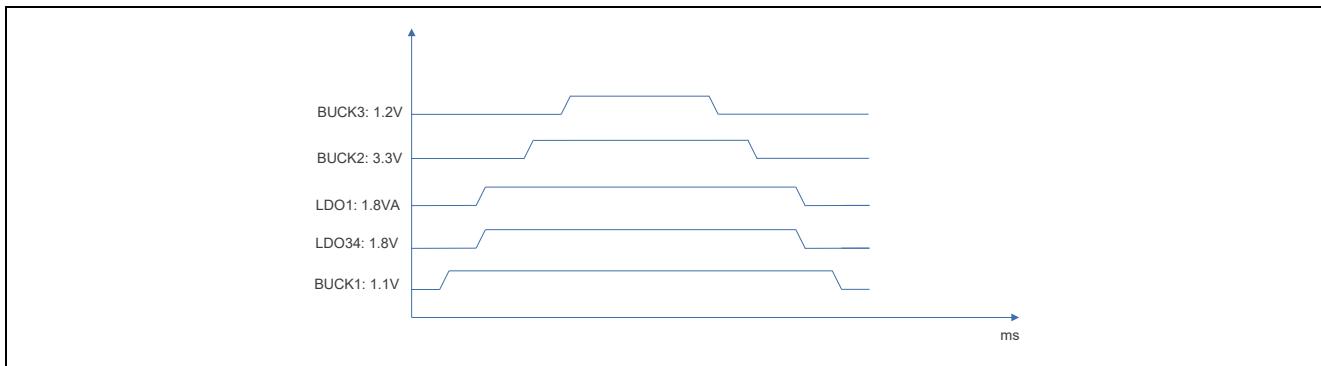

Figure 3-2 Power On/Off Sequence from PMIC

3.2 JTAG

Cortex 10 pin 0.05" JTAG Connector Pinout

The 10 pin cable is Samtec, part number FFSD-05-D-12.00.01-N

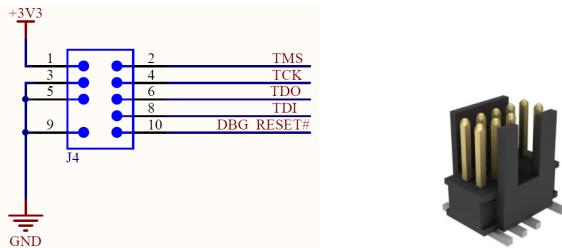

Figure 3-3 JTAG Interface

3.3 Jumper Setting

3.3.1 V/W PWM signal select

PWM signal for V/W phase is generated by using GPT or MTU3 output signal. There are 2 jumpers should be connected to set the PWM timer for motor PWM control in Controller board, that depend on software specification.

Jumper	GPT	MTU3 (default)
J2	2-3 short	1-2 short
J3	1-2 short	2-3 short

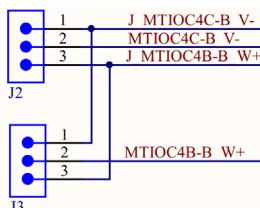

Figure 3-4 Jumper setting for V/W PWM signal

3.3.2 Encoder signal select

J14 and J15 jumper settings are for encoder signal selection. Refer to Section 3.6 Encoder Interfaces as details.

3.3.3 Encoder power supply

The encoder can be supplied the external power. If it needs the external power, power supply can be selected from 3.3V power or the external battery (VBAT).

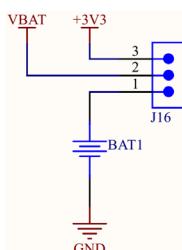

Figure 3-5 Jumper setting for encoder power supply

3.4 Dip Switch

3.4.1 Mode Switch

Selection of Operating Mode for Each Combination of Levels of Mode Setting Pins (MD2, MD1 and MD0)

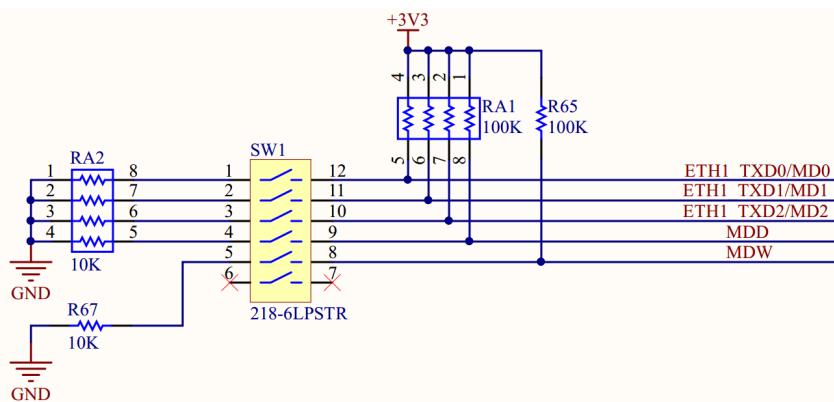

Figure 3-6 Operating Mode

Selection of Operating Mode for Each Combination of Levels of Mode Setting Pins (MD2, MD1 and MD0)

MD2	MD1	MD0	Operating Mode
0	0	0	xSPI0 boot mode (x1 boot Serial flash)
0	0	1	xSPI0 boot mode (x8 boot Serial flash)
0	1	0	16-bit bus boot mode (NOR flash)
0	1	1	32-bit bus boot mode (NOR flash)
1	0	0	xSPI1 boot mode (x1 boot Serial flash)
1	0	1	SCI (UART) boot mode
1	1	0	USB boot mode
1	1	1	Setting prohibited

Selection of JTAG Authentication by Hash

MDD	JTAG Mode
0	Normal mode JTAG Authentication by Hash is disabled.
1	JTAG Authentication by Hash mode

Selection of ATCM wait cycle

MDW	ATCM wait cycle
0	0 wait Valid for CPU operating frequency equal to or less than 400MHz.
1	1 wait

Note) Function in gray font above are not supported.

Selection of Operating Voltage of IO domain 2 and 3 (MDV3 and MDV2) with 3.3V by pull high when MCU reset.

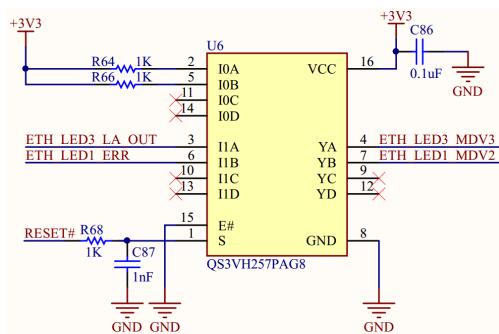

Figure 3-7 Operating Voltage

3.4.2 EtherCAT-ID Setting Switch

A board specific EtherCAT ID can optionally be set.

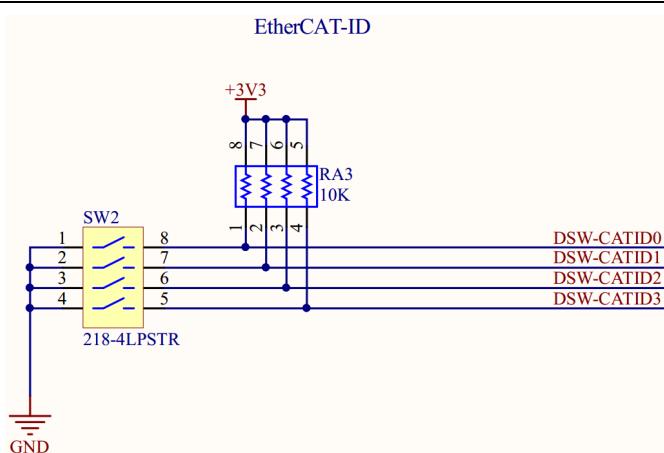

Figure 3-8 EtherCAT-ID setting switch

3.5 LEDs

There are 9 LEDs in the controller board. Please see below for the assignment.

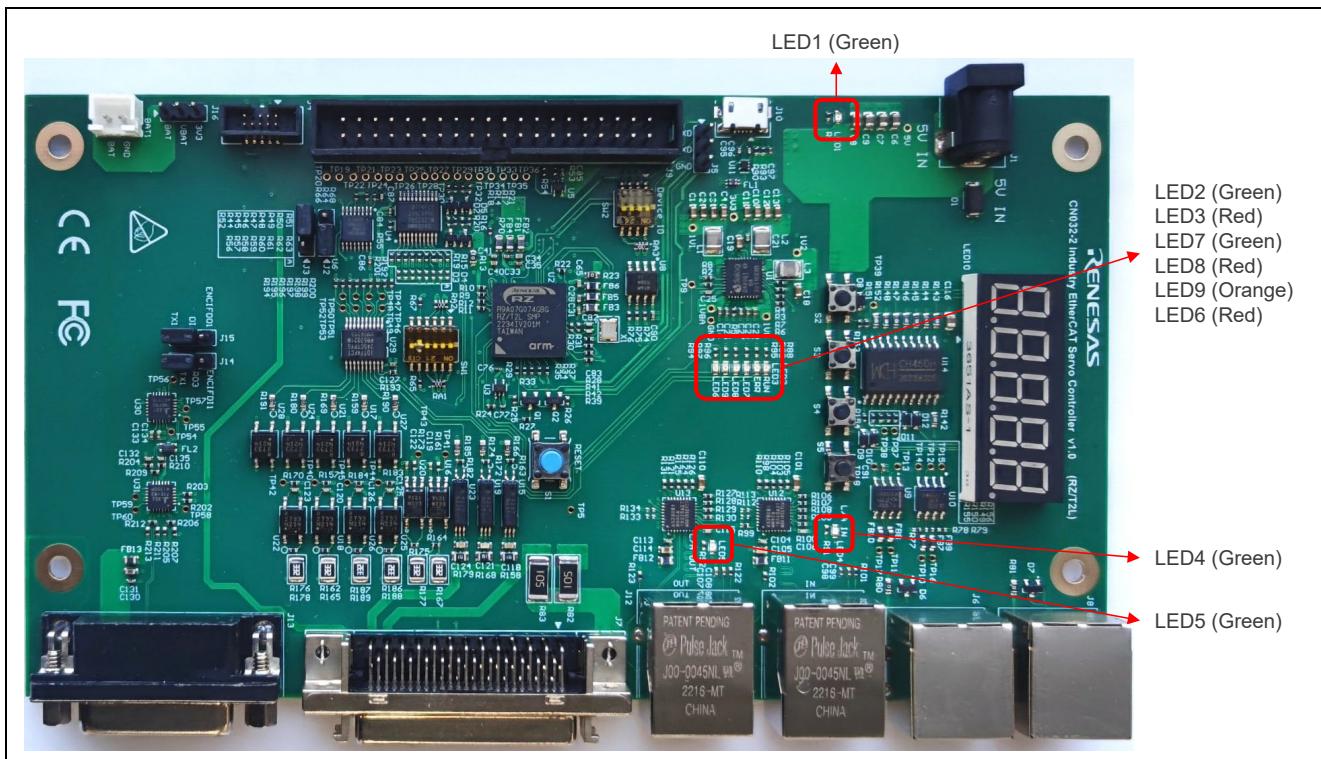

Figure 3-9 Controller board LED

No.	Item	Silk name	Color	Using
1	Power supply LED	VIN	LED1	Green Input power: Light up
2	ESC status LED	ETH_LED0	LED2	Green RUN
3		ETH_LED1	LED3	Red ERR
4		ETH_LED2	LED4	Green L/A IN
5		ETH_LED3	LED5	Green L/A OUT
6	General purpose LED	LED4_ENCIF08	LED6	Red H: Light on/L: Light off
7		LED5	LED7	Green H: Light on/L: Light off
8		LED6_ENCIF10	LED8	Red H: Light on/L: Light off
9		LED7_ENCIF11	LED9	Orange H: Light on/L: Light off

3.6 Encoder Interfaces

There are 2 encoder interfaces in the controller board, please see below for the connection.

Parts number	Type	Description
J13	Absolute Encoder	Support Absolute Encoder or Incremental Encoder.
	Incremental Encoder	Alternative

The 15 pin D-SUB, part number D15S13A4GV00LF.

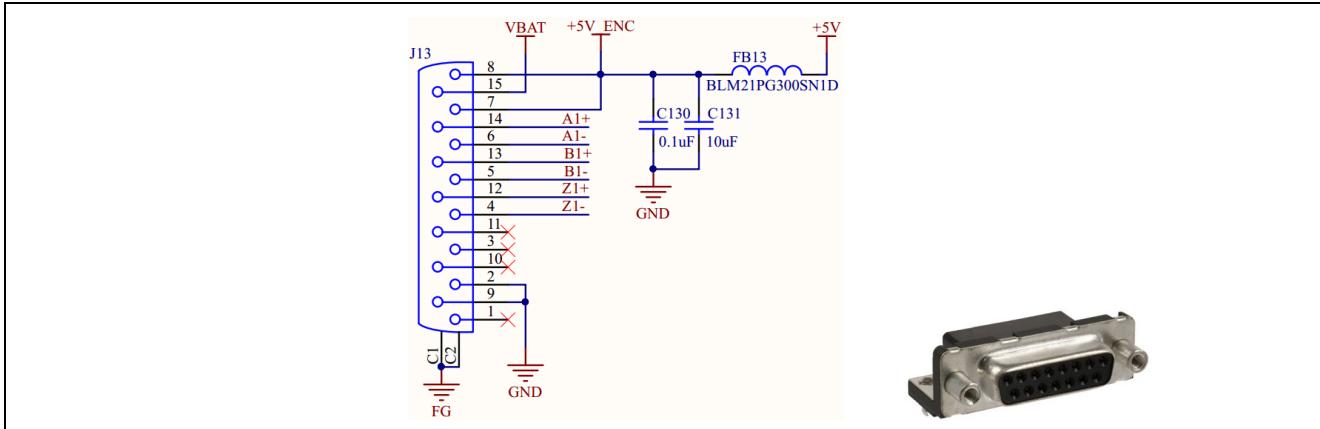

Figure 3-10 Encoder Interface

There are the receiver IC and the transmitter IC for communication with encoder.

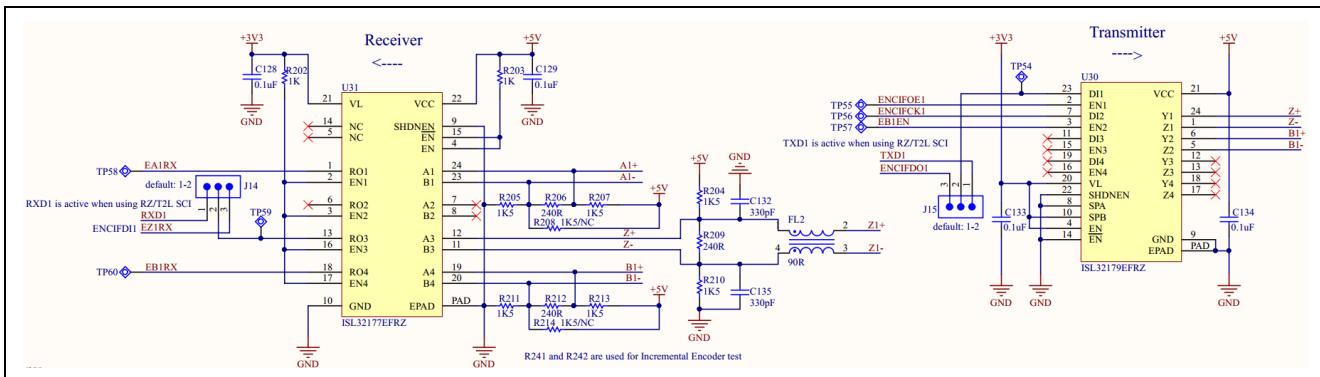

Figure 3-11 Encoder Circuit

There are 2 kinds of interfaces for encoder processing that switch by J14 and J15, an encoder signal is inputted to SCI for Tamagawa encoder, or the signal is inputted to ENCIF for Endat 2.2, BiSS-C, A-format and HIPERFACE-DSL.

Jumper	SCI (default) for Tamagawa encoder	ENCIF for other than Tamagawa encoder
J14	1-2 short	2-3 short
J15	1-2 short	2-3 short

3.7 UART Interfaces

The UART interface is a reserved function for user.

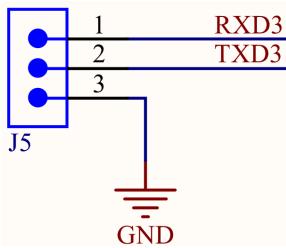

Figure 3-12 UART Interface

3.8 EtherCAT Interface

There are 2 EtherCAT interface in this system, another one is omitted in the below picture. The part number of RJ45 is J00-0045NL.

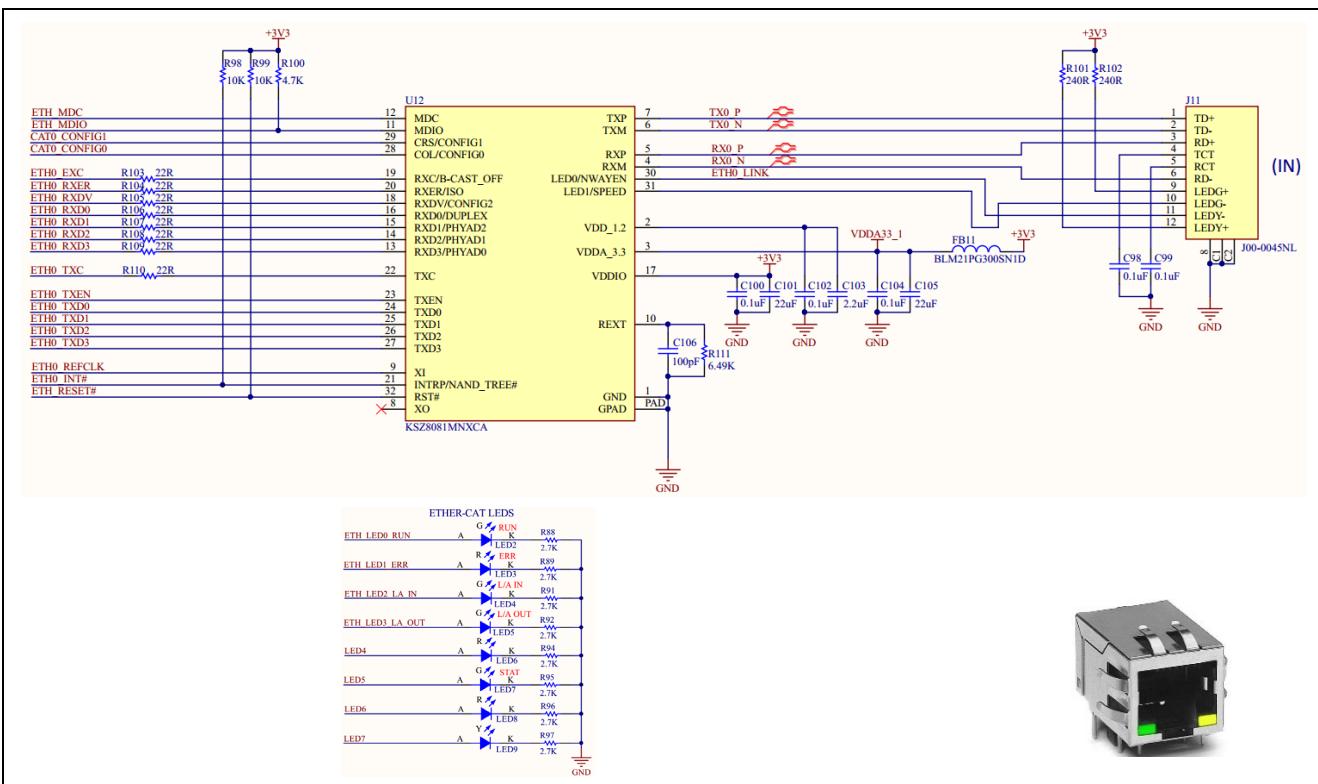

Figure 3-13 EtherCAT Interface

3.9 RS485&CAN Interfaces

The user can use the CAN and RS485 function with RJ45 connector, which only has physical connection function. There are 2 same RJ45 connector J6 and J8 that used for products interconnection, part number MTJ-889X1-FSE.

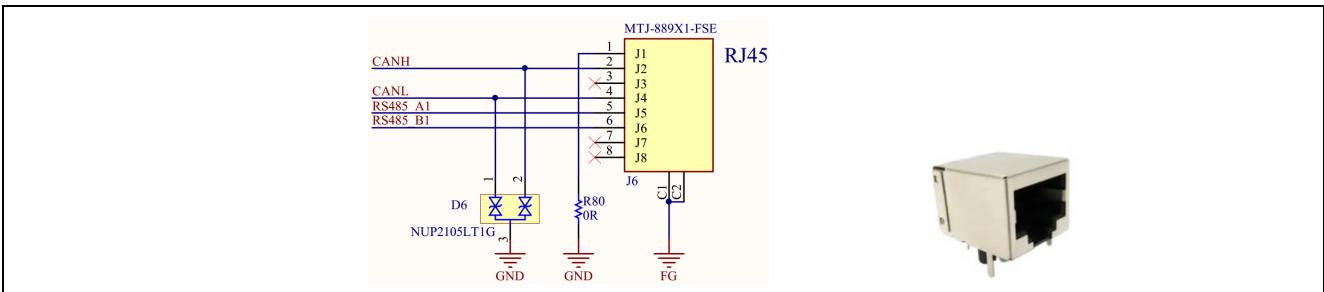

Figure 3-14 RS485&CAN Interface

3.10 USB Interface

The micro-B USB connector used for MCU works on USB boot mode, part number 10118192-0001LF.

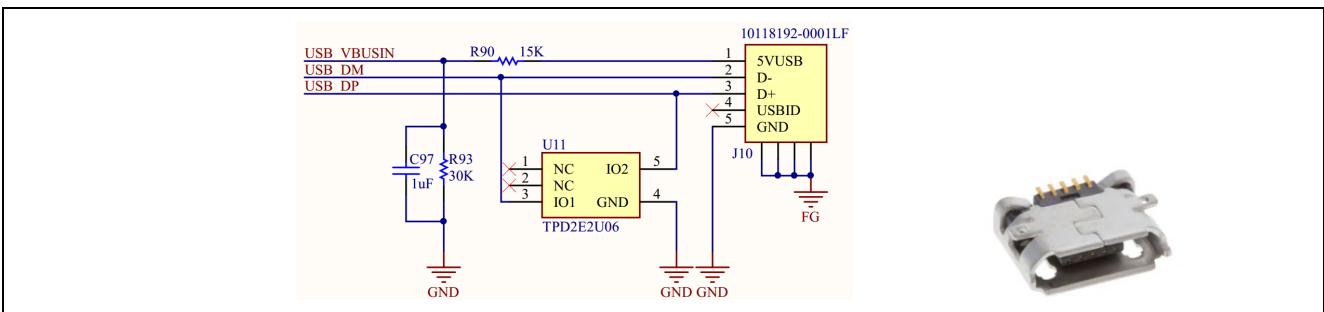

Figure 3-15 USB Interface

3.11 External Control Interface

The external control interface support 8 channel digital output and 6 channel digital input control, part number HL-SCSI50HB90. SCSI-50P connector can be used as a male terminal.

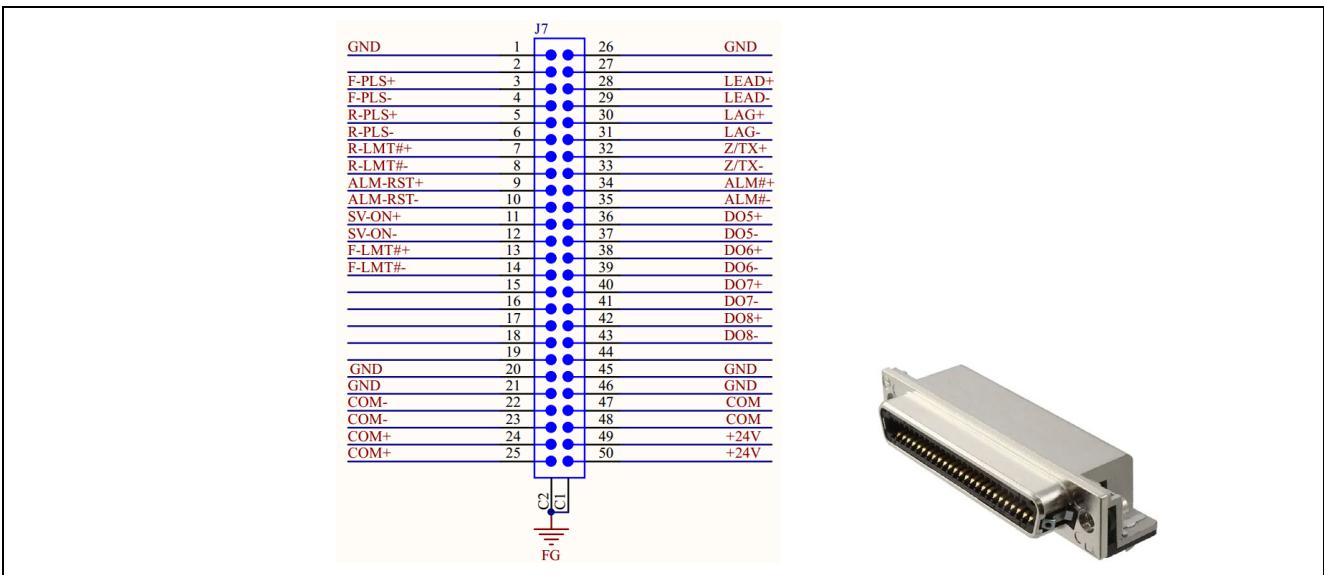

Figure 3-16 External Control Interfaces Interface

3.12 User Interface

A 5-bit eight-segment LED and 4 keys are used for user operation, which are control by driver IC CH450H.

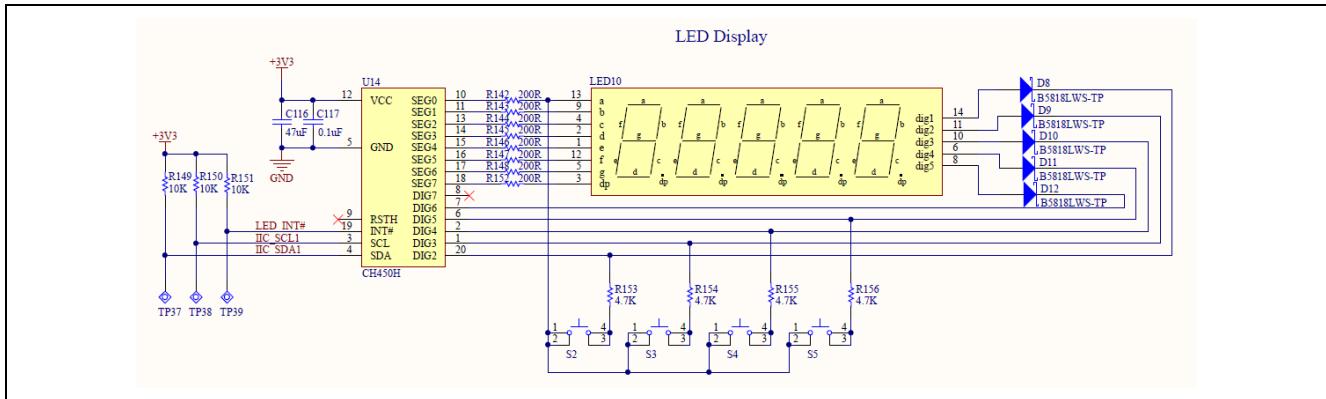

Figure 3-17 User Interface

3.13 Interface between Controller Board and Inverter Board

The system board gets 5V power supply from the inverter board through below interface. It makes motor control by U/V/W signals, 3 channels DS Modulator signal, and input/output signals.

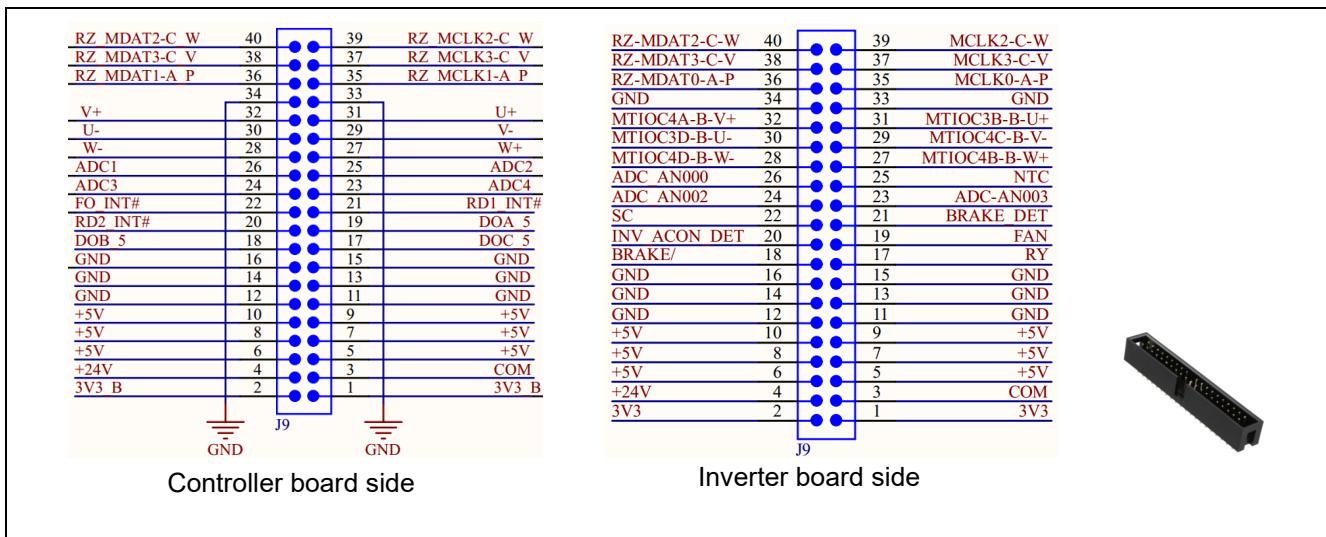

Figure 3-18 Power Board Interface

3.14 Inverter Board Interface

The inverter board need to be inputted 100-250V AC for motor power and controller power. L1/L2 is input to IPM for motor power, and LA/LB is input to transformer for controller power, they are individual.

P/AGND also can input DC power for motor power, if don't input AC power from L1/L2.

PB is for brake control.

EARTH is for ground of 100-250V power and motor FG.

Pin2-8 and pin12 are the necessary input for achieving the motor servo control.

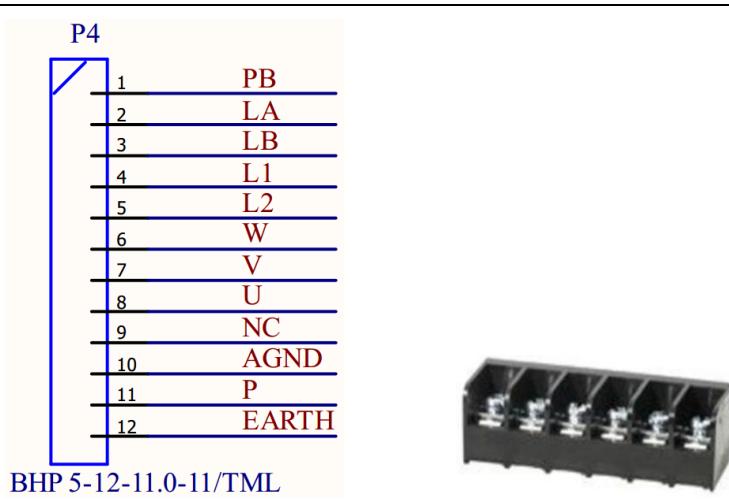

Figure 3-19 Inverter Board Interface

4. Controller Board, Inverter Board Connection Configuration

The connection configuration for CN032 AC Servo Solution image is shown in Figure 4-1.

The cables for the system launch should be connected.

Item	Cables
1	100-250V AC input, Three-wire, L/N/GND
2	Motor cable, U/V/W/shell
3	Encoder cable, D-SUB 15-pin
4	40-pin cable that connects Controller board with Inverter board
5-1	RS232 to USB converter, used to PC control by Renesas GUI
5-2	RS485 to USB converter, used to PC control by Renesas GUI

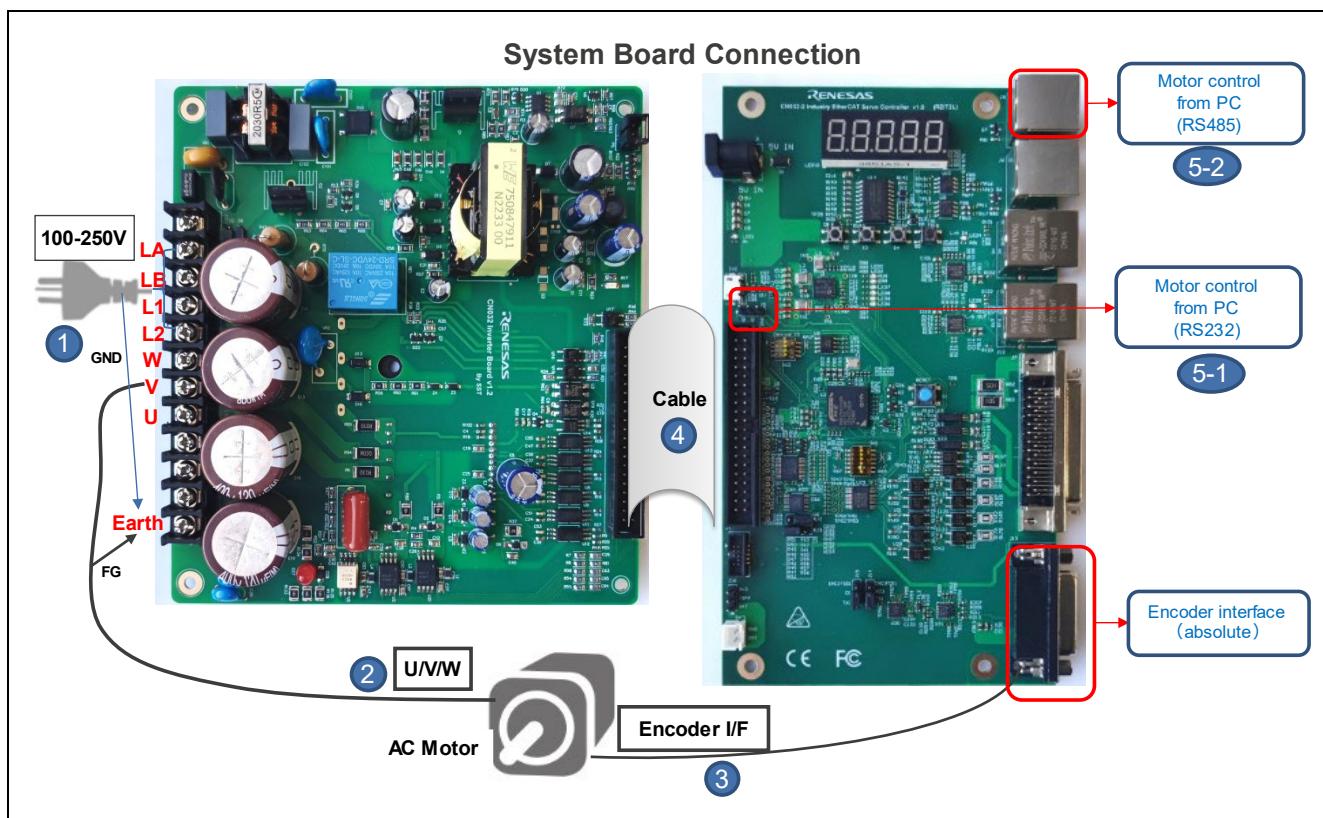

Figure 4-1 Connection Configuration

5. Detection Circuit

Table 5-1 is shown the current and voltage detection circuits mounted on the inverter board and the RZ/T2L connection destinations.

Table 5-1 List of detection circuits

No	Circuit	Pin Number	Function	Circuit diagram silk name
1	Fault detection circuit	P01_4	IRQ3-A	FO_INT#
2	Current detection circuit (V/W) ($\Delta\Sigma$ modulator)	P15_6	MDAT2	RZ_MDAT2-C_W
		P15_5	MCLK2	RZ_MCLK2-C_W
		P22_0	MDAT3	RZ_MDAT3-C_V
		P21_7	MCLK3	RZ_MCLK3-C_V
3	Busbar voltage detection circuit (220V) ($\Delta\Sigma$ modulator)	P15_4	MDAT1	RZ_MDAT1-A_P
		P15_3	MCLK1	RZ_MCLK1-A_P

5.1 Fault Detection Circuit

The fault detection circuit is used to detect short-circuit protection, under-voltage protection and over temperature protection by IPM module. The fault signal VFO outputs low level when SC, UV or OT protection works, which is open drain type. You can protect the motor solution board and motor by monitoring fault signal VFO and forcing the PWM output to go into the Hi-Z state when the output is low.

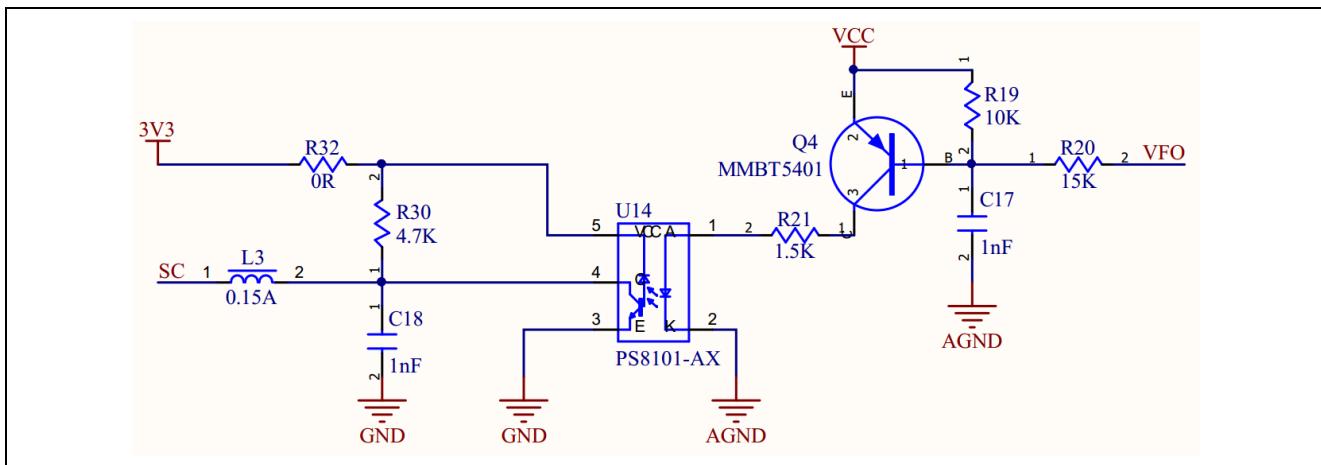

Figure 5-1 Fault Detection Circuit

5.2 Current Detection Circuit (V/W)

The Phase current detection (V/W) are realized through 2 channel Delta-Sigma Modulator. The Phase current (U) can be calculated by software.

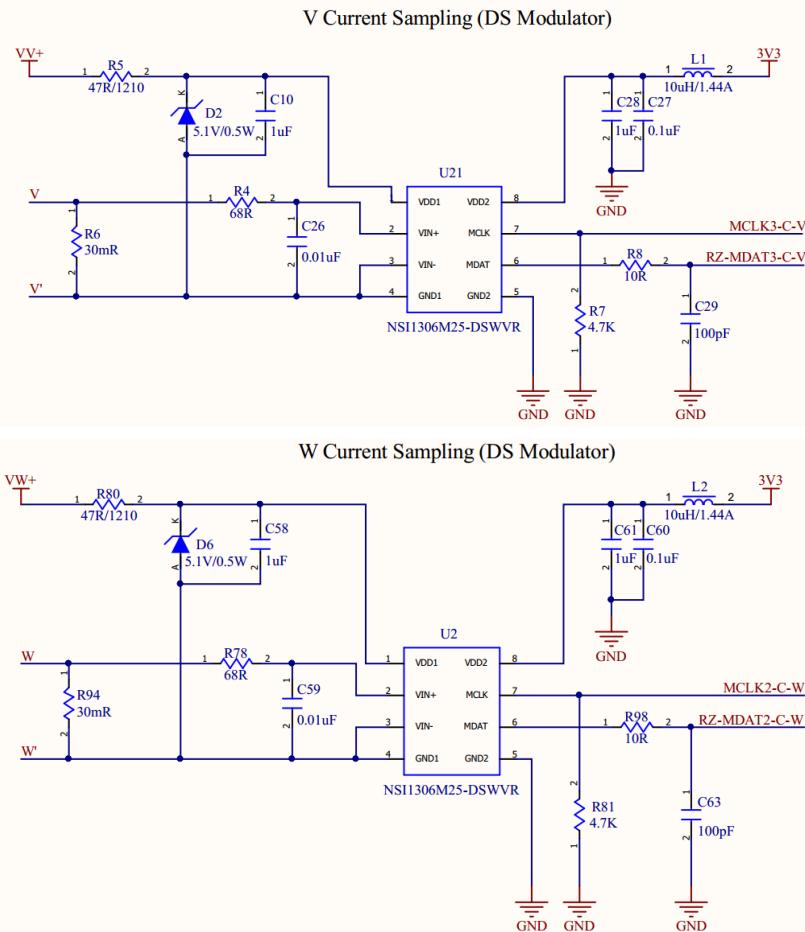

Figure 5-2 Current Detection Circuit (V/W)

5.3 Bus Voltage Detection Circuit (220V)

The bus voltage detection is realized through 1 channel Delta-Sigma Modulator.

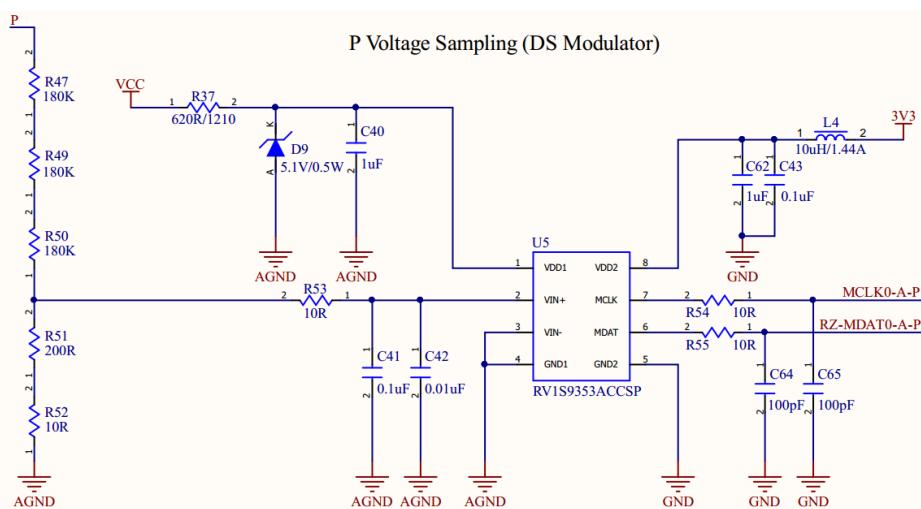

Figure 5-3 Bus Voltage Detection Circuit (220V)

6. Precaution for operation

When using this kit, please kindly comply with the following 1 to 3:

1. Use stable power supply with current 1[A] limit setting to inverter board.
2. Do not use DC12-24[V] power supply jack to controller board.
※The power of controller is supplied from the inverter board.
3. Even after turning off, please do not touch the inverter board when high voltage LED(D27) is on which could be about 3 minutes or more.

If motor malfunctions or makes noise during use, please turn off the power to the inverter board immediately.

If this malfunction symptom continues, please contact our sales office or agency.

7. MCU Pin Map

8. BOM List for Renesas Key Parts

Renesas provides the complete design files for this AC Servo Solution application, includes SCH, PCB, BOM, etc.

Here are the Renesas Key parts used in this system, for more information, please refer to the related files from Renesas.

BOM List from Controller Board

Designator	Description	Manufacturer	Mfg Part Number	Quantity

U4, U29	IC TXRX NON-INVERT 5.25V 20SSOP	Renesas	74FCT245CTPYG	2
U6	IC BUS SWITCH 4 X 2:1 16TSSOP	Renesas	QS3VH257PAG8	1
U7	IC FLASH 128MBIT SPI/QUAD 8SOIC	Renesas	AT25SF128A-SHB-T	1
U8	IC EEPROM 16KBIT I2C 400KHZ 8SOP	Renesas	R1EX24016ASAS	1
U10	IC TRANSCEIVER HALF 1/1 8SOIC	Renesas	ISL3172EIBZ	1
U15, U19, U23	OPTO COUPLER IN 10V~30V 5-LSSO	Renesas	RV1S9207ACCSP	3
U16, U20	OPTO COUPLER IN 2.7V~3.6V 5-SO	Renesas	PS9121-F3-AX	2
U17, U18, U21, U22, U24, U25, U26, U27, U28	OPTOISOLATOR 2.5KV DARL 4SMD	Renesas	PS2733-1-A	9
U30	IC DRIVER 4/0 24QFN	Renesas	ISL32179EFRZ	1
U31	IC RECEIVER 0/4 24QFN	Renesas	ISL32177EFRZ	1

BOM List from Inverter Board

Designator	Description	Manufacturer	Mfg Part Number	Quantity
U3, U7, U19	OPTOISOLATOR 5KV TRANS 4SMD	Renesas	PS2561DL-1	3
U5	DELTA-SIGMA MODULATOR (OPTOCPLR)	Renesas	RV1S9353A	1
U8, U9, U10, U11, U12, U13	15Mbps IPM Drive Photocouplers	Renesas	RV1S9061A	6
U14	OPTOISO 3.75KV PUSH PULL 6SO	Renesas	PS8101-AX	1
U15, U16, U17	OPTOISOLATOR 3.75KV TRANS 4SOP	Renesas	PS2761B-1	3

Revision History

Rev.	Date	Description	
		Page	Summary
1.00	Feb.28, 2023	–	First Edition issued
1.01	Dec.14, 2023	13 19 other	Parts number of External Control Interface corrected. Precaution added. Typo fixed.

General Precautions in the Handling of Microprocessing Unit and Microcontroller Unit Products

The following usage notes are applicable to all Microprocessing unit and Microcontroller unit products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

1. Precaution against Electrostatic Discharge (ESD)

A strong electrical field, when exposed to a CMOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop the generation of static electricity as much as possible, and quickly dissipate it when it occurs. Environmental control must be adequate. When it is dry, a humidifier should be used. This is recommended to avoid using insulators that can easily build up static electricity.

Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors must be grounded. The operator must also be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions must be taken for printed circuit boards with mounted semiconductor devices.

2. Processing at power-on

The state of the product is undefined at the time when power is supplied. The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the time when power is supplied. In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the time when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the time when power is supplied until the power reaches the level at which resetting is specified.

3. Input of signal during power-off state

Do not input signals or an I/O pull-up power supply while the device is powered off. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Follow the guideline for input signal during power-off state as described in your product documentation.

4. Handling of unused pins

Handle unused pins in accordance with the directions given under handling of unused pins in the manual. The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of the LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible.

5. Clock signals

After applying a reset, only release the reset line after the operating clock signal becomes stable. When switching the clock signal during program execution, wait until the target clock signal is stabilized. When the clock signal is generated with an external resonator or from an external oscillator during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Additionally, when switching to a clock signal produced with an external resonator or by an external oscillator while program execution is in progress, wait until the target clock signal is stable.

6. Voltage application waveform at input pin

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (Max.) and V_{IH} (Min.) due to noise, for example, the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (Max.) and V_{IH} (Min.).

7. Prohibition of access to reserved addresses

Access to reserved addresses is prohibited. The reserved addresses are provided for possible future expansion of functions. Do not access these addresses as the correct operation of the LSI is not guaranteed.

8. Differences between products

Before changing from one product to another, for example to a product with a different part number, confirm that the change will not lead to problems. The characteristics of a microprocessing unit or microcontroller unit products in the same group but having a different part number might differ in terms of internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

- IEEE is a registered trademark of the Institute of Electrical and Electronics Engineers Inc
- EtherCAT® is registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany.
- Additionally all product names and service names in this document are a trademark or a registered trademark which belongs to the respective owners.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall be responsible for determining what licenses are required from any third parties, and obtaining such licenses for the lawful import, export, manufacture, sales, utilization, distribution or other disposal of any products incorporating Renesas Electronics products, if required.
5. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
6. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.

7. No semiconductor product is absolutely secure. Notwithstanding any security measures or features that may be implemented in Renesas Electronics hardware or software products, Renesas Electronics shall have absolutely no liability arising out of any vulnerability or security breach, including but not limited to any unauthorized access to or use of a Renesas Electronics product or a system that uses a Renesas Electronics product. RENESAS ELECTRONICS DOES NOT WARRANT OR GUARANTEE THAT RENESAS ELECTRONICS PRODUCTS, OR ANY SYSTEMS CREATED USING RENESAS ELECTRONICS PRODUCTS WILL BE INVULNERABLE OR FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION ("Vulnerability Issues"). RENESAS ELECTRONICS DISCLAIMS ANY AND ALL RESPONSIBILITY OR LIABILITY ARISING FROM OR RELATED TO ANY VULNERABILITY ISSUES. FURTHERMORE, TO THE EXTENT PERMITTED BY APPLICABLE LAW, RENESAS ELECTRONICS DISCLAIMS ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THIS DOCUMENT AND ANY RELATED OR ACCOMPANYING SOFTWARE OR HARDWARE, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.
8. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
12. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
13. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
14. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
