
16-Channel LED Driver for Local Dimming

1 Description

The AS3812 is the next generation of fully integrated 16-channel LED backlight driver. LED current set resistors are integrated in order to save external components as well as reducing the pin-count of the IC while maintaining a very high absolute LED current accuracy of $\pm 1\%$.

The speed of the current regulation has been increased to support minimum PWM on times down to $1\mu\text{s}$. 12-bit fully flexible PWM generators per channel and 10-bit LED current resolution can be used to adjust the brightness of the LED strings.

Dialog's patented digital enhanced DC/DC feedback function is regulating any external SMPS to the best suitable output voltage needs of the LED strings to minimize power dissipation.

Dialog's patented dimming method allows synchronizing the PWM generators with V/HSYNC of the video SOC/GPU.

The device can be programmed via SPI and daisy chain connection to cascade many devices easily.
